• PROFILE

I am a **Junior FullStack Developer** specializing in **React JS**, **Next JS** and **Node JS**. I have experience developing applications with HTML, CSS, JavaScript, and TypeScript on React. Additionally, I build my applications with test coverage using Jest, Vitest, and/or React Testing Library. My knowledge in NodeJS, ExpressJS, and SQL/noSQL allows me to build more complex Frontend and Backend projects with database integration and access them more easily using GraphQL and Prisma. My focus on improving application performance and interaction demonstrates my attention to detail and adaptability, which enables me to solve problems and assist my team effectively.

• MAIN PERSONAL PROJECTS

Personal Portfolio

A showcase of my skills, knowledge, and projects, and with a personal blog connection. Developed using React with TypeScript, TailwindCSS, Vite and its backend functionalities developed with GraphQL. It includes my contacts information and personal details, providing an overview of my capabilities and achievements.

In.Orbit - Personal Goal Management

Fullstack project using Frontend technologies React | TypeScript | TailwindCSS and Backend technologies NodeJS | Fastify | Docker | Drizzle | PostgreSQL. The main focus of the project is to add weekly goals to be accomplished and track their frequency. The data is added to the database, including completed goals, showcasing the FullStack integration on the user interface in a responsive way.

Dr. Lorenza - The Foundations of a Fulfilling Life

A freelance project dedicated to Dr. Lorenza, a nutraceutical physician. Developed with React, TypeScript and Vite. The site features an integrated blog, created with Hygraph and the data is collected using GraphQL, where Dr. Lorenza can post articles and interact with users. This project allowed me to enhance my client communication skills and develop the project autonomously. Automated tests using React Testing Library and Vitest ensure the project's reliability.

API for User Creation and Password Authentication

Personal project of an API aimed at registering users in the database and performing authentications with tokens, using JWT, password encryption with Bcrypt, form data validation with Zod, and much more. The application is developed with Node.js, TypeScript, Fastify, and a NoSQL MongoDB database. The API allows creating users, logging in, updating, and deleting data, among other functionalities. The project focuses on security and data handling.

• C O U R S E S

Rocketseat - Fullstack Development: Focused on Node.js and Next.js

Currently

Next.JS Course - From the beggining to Advanced with Project

Currently

Backend Developer on NodeJS | ExpressJS | SQL | HTTP | Prisma, DevQuest

Completion: July 2024

[Certificate](#)

Web Developer on HTML5 | CSS3 | JavaScript | React | TypeScript | Redux, DevQuest

Completion: April 2024

[Certificate](#)

Integrative Tests Jest | Vitest | React Testing Library, Alura

Completion: April 2024

[Certificate](#)

• S K I L L S

- **Attention to the Details:** Ensures meticulous frontend precision for seamless user experiences.
- **Adaptability:** Rapidly adapts to evolving frontend technologies to deliver cutting-edge solutions.
- **Proactive Collaboration:** Engages collaboratively for aligned project outcomes in frontend development.
